PIPER

Discover PIPER from AQForm – a modern solution that combines minimalist design with functionality. The ability to connect up to 15 hanging modules from a single power point, flexible connectors, two lengths, the option to mount vertically, at an angle, or on the wall, as well as an integrated colour temperature switch on the fixture and Phase-Control dimming as standard, opens up a wide range of possibilities for design creativity!

SUSPENDED

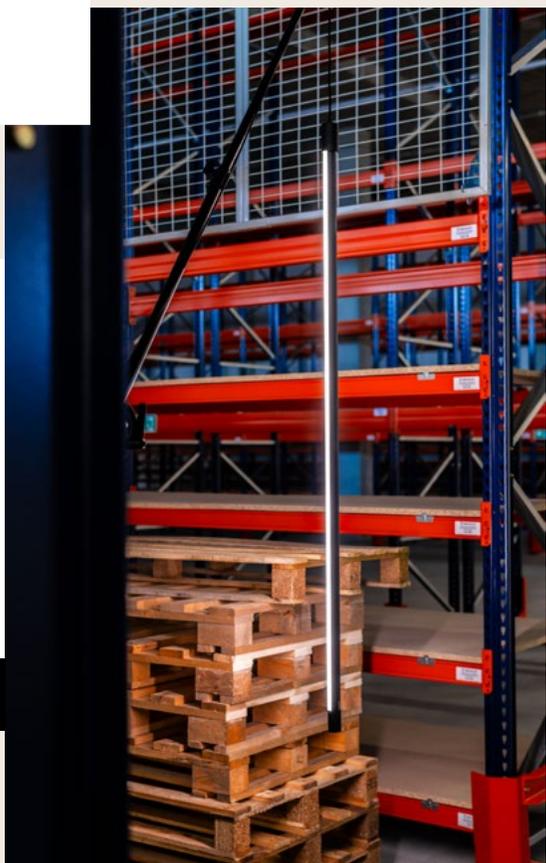

A single lighting module suspended on stylish olive-coloured straps. The fixture can be fitted with a TOP, directing the light more downward.

→ 12

VERT

A fixture suspended vertically downward on a single cable. It works perfectly as a single accent or as part of a group in a lighting composition.

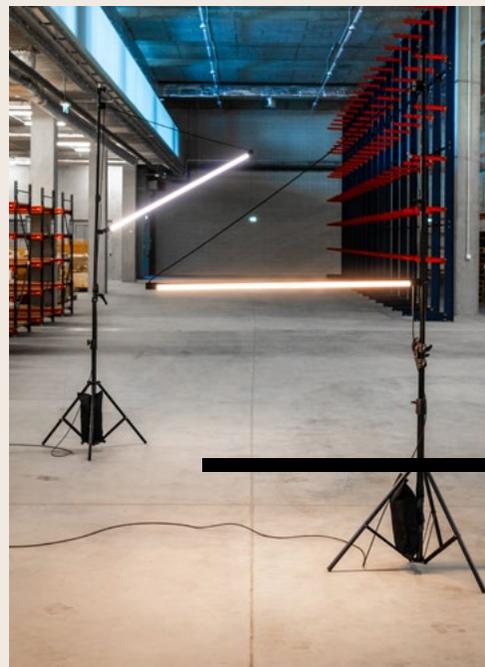

→ 18

SYSTEM

A real treat for creativity: the ability to connect up to 15 hanging modules powered from a single point, with the option for parallel or angled ceiling mounting.

→ 24

WALL

A linear wall luminaire that is hard to overlook. Available in a fixed version or with a joint allowing movement within a range of 25°.

→ 32

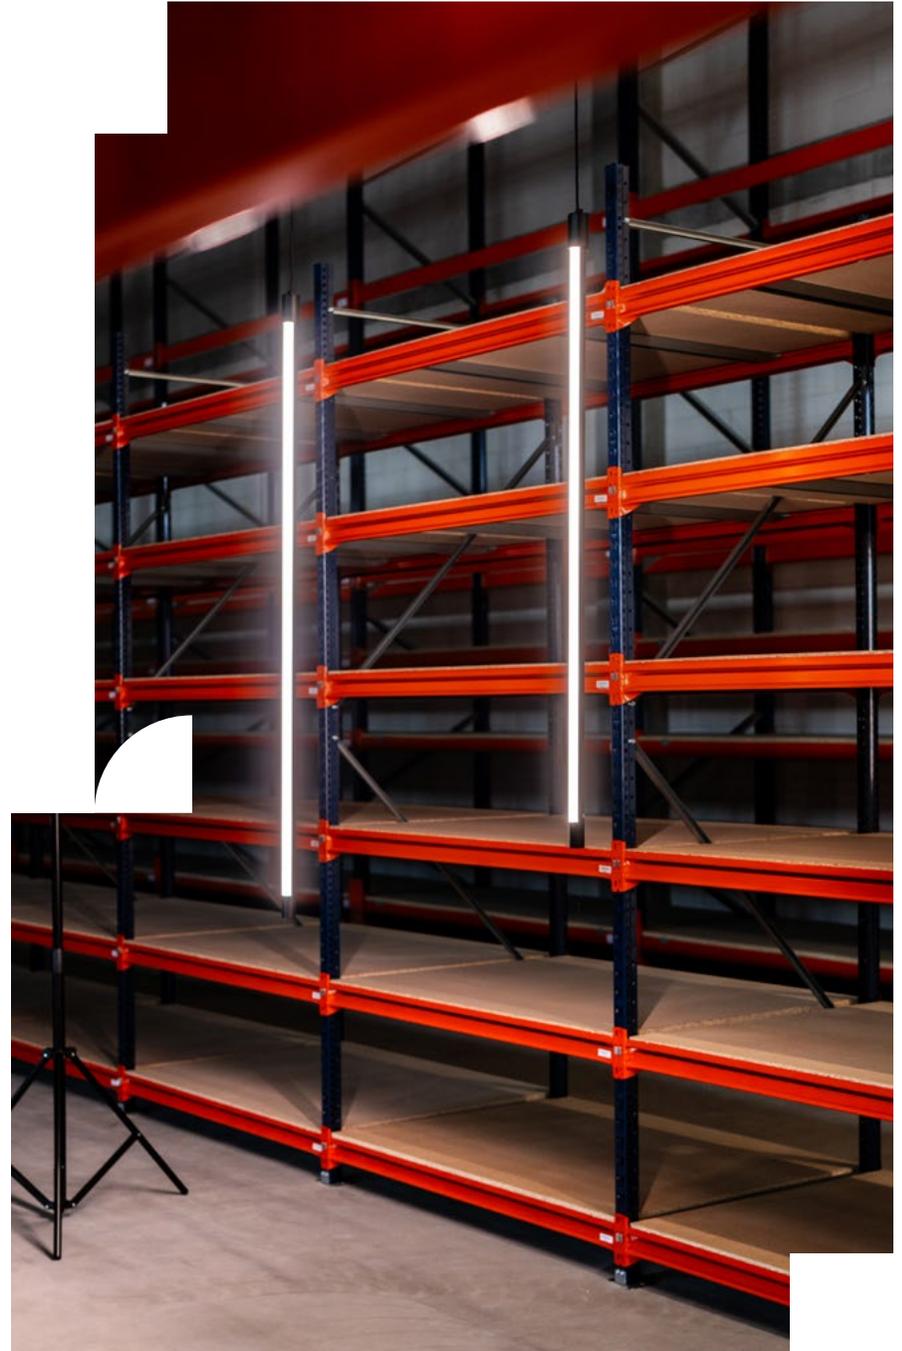

Variable colour temperature with a single click

One of the key features of the PIPER family is the built-in switch that allows you to change the light's colour temperature. You can choose between warm white (2700K), neutral white (3000K), and cool white (4000K). With just one click, you can adjust the lighting to match the mood and function of the room.

Two lengths

PIPER lighting modules are available in two lengths: 130 cm and 150 cm, making it easy to customize the lighting for different spaces and tasks. Regardless of the version, the suspension length and cables can be adjusted without the need for specialized tools, further simplifying the installation and adaptation of the system to specific requirements.

SYSTEM

The system version of the PIPER fixture allows you to power up to 15 modules from a single ceiling canopy. This enables the creation of an extensive lighting composition without the need to run wiring to each fixture or install multiple canopies. The lighting modules can be connected using flexible black connectors (15 cm and 100 cm) or directly plugged into each other.

Of course, there is also the option to mount a single module in a more traditional arrangement. In this version, the PIPER fixture is suspended on a 15mm wide olive-coloured strap as standard. You can choose between a variant with a visible light-emitting element or with the TOP accessory, which directs the light downward. The TOP accessory is particularly useful for task lighting, focusing on a specific surface, such as a table, and its immediate surroundings, providing targeted illumination where needed.

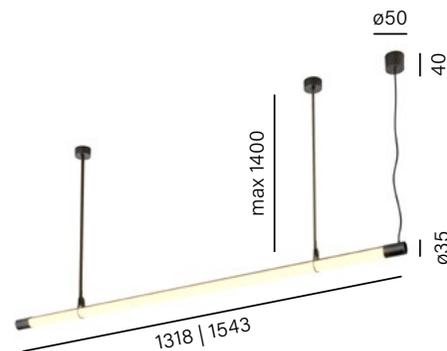

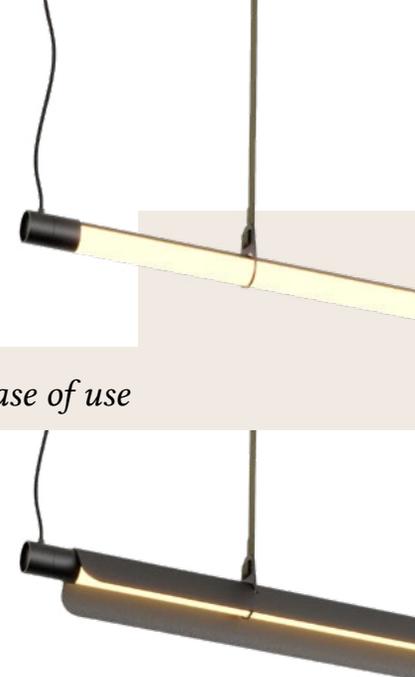

STANDARD

Piper suspended

Visual lightness, modern design, and ease of use

A single lighting module that combines minimalist design with diffused light, subtly enhancing the space. The standard version of the pendant fixture is suspended on a 15 mm wide olive-coloured fabric strap. An interesting feature is the manual adjustment of the colour temperature via a switch built into the fixture.

STYL

A 15 mm wide olive-coloured fabric strap is a hallmark of PIPER suspended.

FORMA

Top

TOP is a sleek accessory that can be placed on top of the fixture. Available in two sizes to match the lighting module, it requires no special installation — simply place it on the fixture. Once applied, the light is directed more downward.

Piper_{vert}

Slim elegance and easy arrangement

Resembling an icicle, PIPER vert works beautifully both as a standalone piece and in compositions of several, or even dozens, of fixtures. This versatility makes PIPER vert perfect for creating captivating arrangements in hotel lobbies, home living rooms, or modern staircases. Its diffused light is ideal for softly illuminating the surrounding space.

Piper system suspended

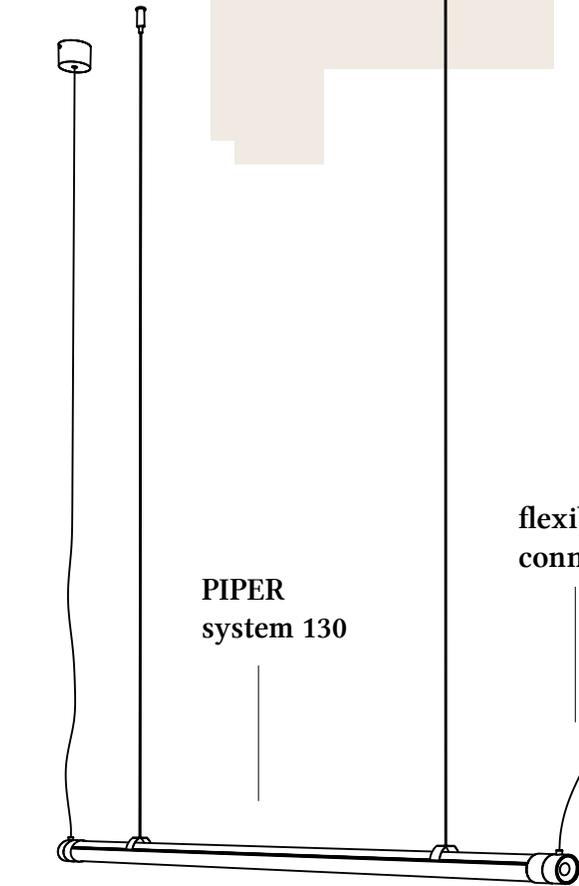

Flexibility and modularity

The PIPER system is all about modularity and flexibility. The light modules, connected by a flexible cord, allow for the creation of unique lighting compositions tailored to the specific needs of any interior. With the ability to power up to 15 modules from a single ceiling canopy, PIPER enables the development of extensive lighting setups without the need for complex electrical installations. PIPER also offers various ways to position the hanging module relative to the floor: it can be mounted parallel to the ground, at an angle, or even suspended vertically like an icicle (Vert version)!

ESTETYKA

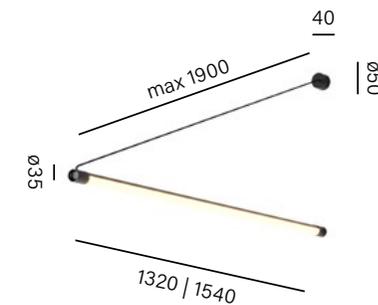

Piper wall / wall move

*A distinctive accent on the wall
in either a fixed or movable version*

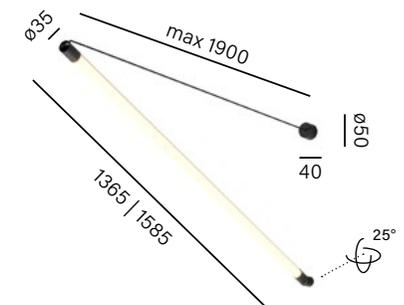

The PIPER wall soft, diffused light is perfect for creating a cozy atmosphere while also illuminating the surrounding space. For the wall version, there are two types of installation available: a fixed mount at the right angle to the wall and an adjustable joint that allows you to change the angle of the fixture relative to the wall by up to 25°.
